## DESCRIPTION

Models DEH 036, 048, 060, 072 (3, 4, 5, 6 Nominal Tons).

YORK STELLAR Units are single package energy efficient high ambient rooftops air conditioner. All Models have single refrigerant circuits for efficient part load operation. STELLAR units are designed for roof top slab mounted at ground level or on steel platform installation above floor or roof. A wide range of factory mounted options and field installed accessories make the STELLAR units suitable for almost every application.

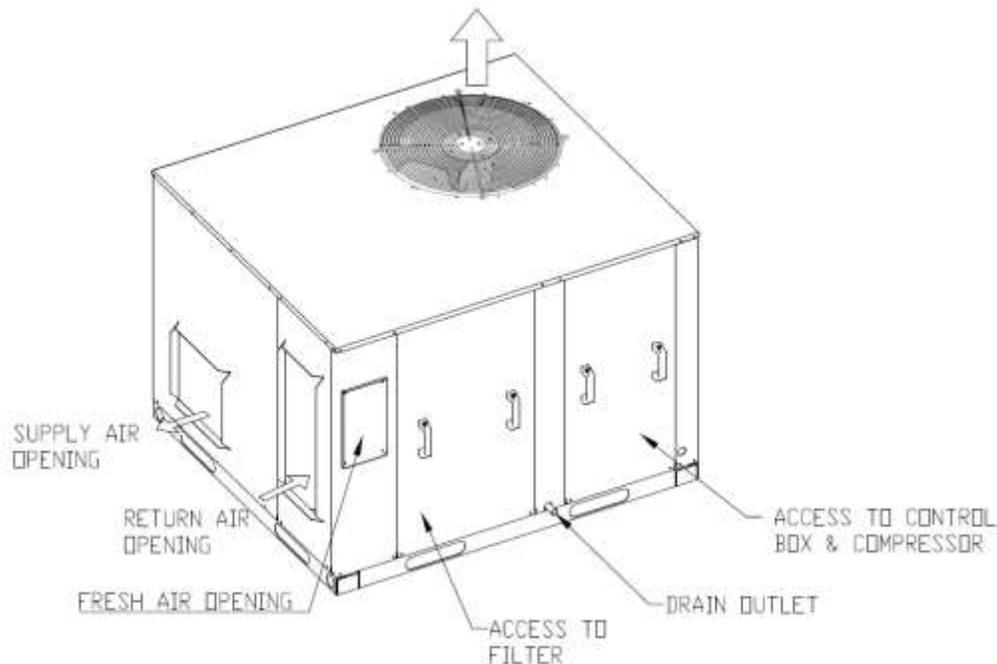

YORK STELLAR units are designed to operate satisfactorily in wide range of ambient temperatures from 131°F (55°C) down to 50°F (10°C) as standard.

YORK STELLAR packaged air conditioners are rated in accordance with AHRI 340/360.

All standard units include:

- Powder paint finish that meets ASTM B 117, 750 hour salt spray standard.
- Single stage cooling provided by single independent refrigeration circuits with expansion valves, filter drier, high and low pressure switches.
- High efficiency compressors.
- Side air discharge configuration.
- Direct drive arrangement.
- Totally Enclosed Air over (TEAO) Evaporator fan motors with Class B Insulation.
- Totally Enclosed Air over (TEAO) Condenser fan motors with Class B/F Insulation.
- Fresh air intake panel.
- Copper tubes / Aluminum fins Evaporator coils.
- Micro-Channel Aluminum alloy Condenser coils.
- 2 inch disposable filter with easy access.
- Rigging holes in base rails for overhead lifting. Single point power connection.
- Complete factory package-tested, charged and wired.

## TYPICAL UNIT CONFIGURATION

**FEATURES**

Stellar units are self-contained and assembled on full perimeter base rails with rigging holes in the four corners for overhead rigging. Every unit is completely piped, wired, charged and tested at the factory to simplify the field installation and to provide years of dependable operation. All models are suitable for horizontal duct connections. The power supply can be routed into the control box through a gland in the wiring panel on the front of the unit.

Compressors type of an advanced design ensuring high Energy Efficiency Ratio, less noise, less vibration and outstanding endurance. Internal pressure relief valve, internal compressor motor protection. Every refrigerant circuit includes an expansion valve, liquid line filter-drier, a discharge line high pressure switch and low pressure switch to protect all system components.

Each supply air blower is equipped with a direct motor drive to meet the exact requirements of the application. All evaporator blower motors are TEAO with Class B insulation.

A fixed outdoor air intake connection that is designed for 25% fresh air is available as standard. Fresh air dampers are optional for field / factory installation.

Condenser fans are propeller type of heavy duty construction, dynamically balanced and suitable for operate up to 80°C ambient. Fans are driven by TEAO motors with Class B/F insulation. The fan blade pitch Angle is designed for maximum airflow and minimum noise.

The evaporator and microchannel coils are constructed of seamless internally enhanced copper tubes and aluminum tubes which are mechanically bonded to aluminum fins. Heat Exchangers are tested to a minimum pressure of 445/236 psig High/Low.

A GI painted drain pan with side condensate removal ensures zero water retention and no corrosion that ensures indoor air quality (IAQ).

All units have long lasting powder paint cabinets with a robust 40 microns thick paint coating that meets ASTM-B-117 standards and suitable for 750 hour salt spray test, ensuring excellent resistance to corrosion in the harshest conditions. The cabinet of all Stellar is internally lined by 13mm Elastomeric insulation that minimize heat gain and improves IAQ.

**OPTIONS AVAILABLE**

- Heresite Coated Evaporator Coils (factory installed): Coating is applied by spray for maximum corrosion protection.
- Techno Coating and E-Coating Condenser Coils (factory installed).
- Copper Tube and Copper Fin Evaporator Coils (factory installed).
- Filter Options: Standard units are shipped, installed with 2" throw away filters. 2" washable aluminum filters.
- Fresh Air Dampers: Manual or motorized.
- Electric Heaters: All electric heat models (heater factory/field installed only) are wired for a single power source and include a bank of nickel chromium elements to be mounted at the discharge of the supply air blower to provide a high velocity and uniform distribution of air across the heating elements. Every element is fully protected against excessive current and temperature by high temperature thermal cut-out (HTIC).
- Main Disconnect Switch (factory installed): Suitably sized in accordance with the applicable electrical codes.
- Thermostat (field installed): For Single stage cooling only and a single stage heating.
- Smoke Detectors for supply air & return air (factory installed): The smoke detectors stop operation of the unit by interrupting power to the control board if smokes detected within the air compartment.

## SELECTION METHOD:

The following steps illustrate the selection of a DEH Package Unit for a Total Capacity requirement of 46MBh and an Airflow of 1,600 cfm. The unit operating Parameters are;

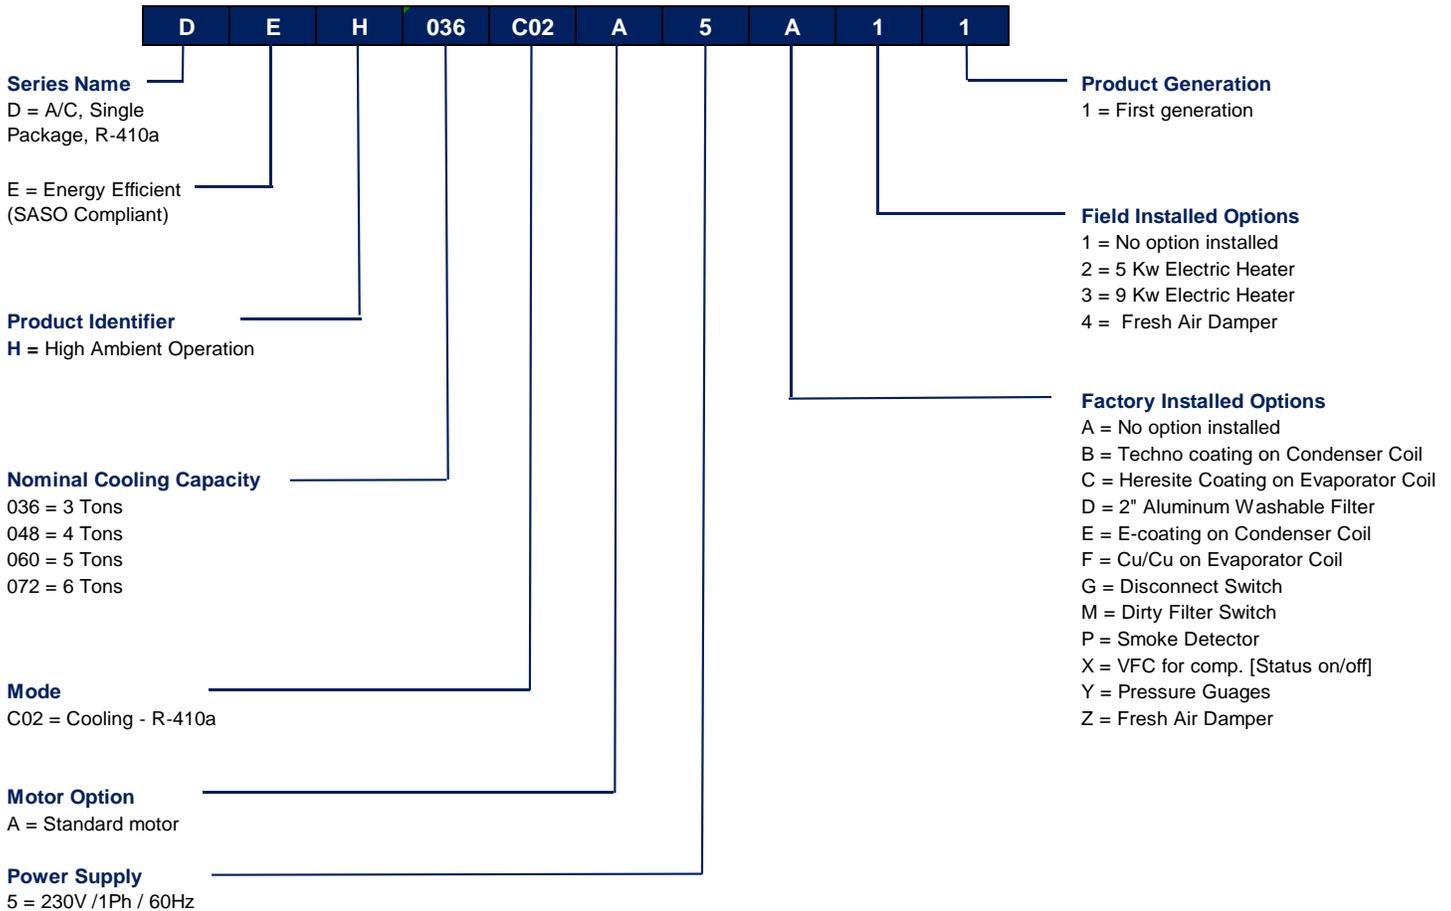

Entering Air Temperature: 80/67°F (DB/WB)  
 Ambient Temperature: 95°F  
 Fan External Static Pressure: 0.6 inch wg.

Step 1 Select the unit model by referring to "Cooling Performance data" table for 95°F ambient on Page 9 Scroll down the "Total capacity" and "Entering Air WBT" columns until 46 MBH With (or a value close to it) is found at 67°F WB For an airflow close to 1,600 cfm. The selected model is DEH048 giving total Capacity 49.6 MBh with the actual compressor power input being 3.23 KW.

Step 2 For the sensible capacity read the value at the Intersection of the same row (as the WB in step1) and the 80° DB column on the right. The Sensible capacity for the unit in this example is 36.5 MBh.

Refer "Fan Performance Data" on page 17 to Check the motor size .

TYPICAL WIRING DIAGRAM

**GUIDE SPECIFICATION**

**DESCRIPTION**

Standard Units shall be factory assembled, single packaged, cool only, and designed for outdoor mounted installation. They shall have built-in side duct connections for discharge supply and return. The units shall be factory wired, piped, charged with R-410a refrigerant and factory tested prior to shipment. All unit wiring shall be both numbered and colour coded.

**UNIT CABINET AND FRAME**

Unit cabinet shall be constructed of G90 galvanized steel, with exterior surfaces coated with a non-chalking powdered paint finish, to meet ASTM B117 standard suitable for 750 hours salt spray test. The indoor blower and air supply section shall be insulated with 13mm Elastomeric insulation. Cabinet panels shall be easily removable for servicing and maintenance. Full perimeter base rails shall be provided to assure reliable transit of equipment, overhead rigging and fork lifting. Disposable 2" filters shall be furnished and be accessible through a removable access door, sealed airtight. Condensate connection shall be minimum of 1.0" FPT connection.

**INDOOR (EVAPORATOR) FAN ASSEMBLY**

Fan shall be a direct drive assembly. Fan wheel shall be DIDW type with forward curved High static blades, dynamically balanced to operate smoothly throughout the entire range of operation. Airflow design shall be constant air volume. Bearings shall be lubricated for life. The evaporator motor shall be TEAO class B insulation. Five steps speed torque EMC motor that maintain three levels of air flow rates at different external static pressure.

**OUTDOOR (CONDENSER) FAN ASSEMBLY**

Each unit shall have single condenser fans / motors. The outdoor fans shall be of direct driven propeller type, discharge air vertically and shall be dynamically balanced for smooth operation. The outdoor fan motors shall be TEAO with class B insulation. Motors shall have permanently lubricated bearings and shall have external overload protection.

**REFRIGERANT COMPONENTS**

**Compressors**

a. All compressors shall be internally protected with internal high pressure relief and over temperature protection. The compressors shall be mounted on neoprene mounts to eliminate vibration from being transmitted to the unit structure and cabinet.

**Coils**

- a. Evaporator and microchannel coils shall have aluminum fins mechanically bonded to seamless internally enhanced copper tubes and aluminum tubes with all joints brazed. 2 pass microchannel Condenser fin spacing shall be limited to 23 fpi for all models to maximize heat transfer to minimize blockage and high pressure operating condition, special E-coating shall be available as factory options.

- b. Evaporator and Condenser coils shall be of the direct expansion, draw-thru, design. Coils shall be tested to a minimum pressure of 445/236 psig High/Low.

Refrigerant Circuit and Refrigerant Safety components shall include

- a. Thermo static expansion valve with external equalizing line.
- b. Filter drier to eliminate any moisture or foreign matter.
- c. Accessible service gauge connections on both suction and discharge lines to charge, evacuate, and measure refrigerant pressure during any necessary servicing or troubleshooting, without losing charge.
- d. The refrigeration system shall provide at least 10°F of sub-cooling at design conditions.
- e. All models shall have single independent refrigerant circuits.
- f. Unit shall operate with conventional thermostat designs and have a low voltage terminal strip for easy hookup.

**ELECTRIC HEATING – OPTIONAL**

Nickel chromium electric heating elements shall be provided as required by the application with single stage control for 5kW capacities. The heating section shall have a primary limit control(s) and automatic reset to prevent the heating element system from operating at an excessive temperature. Units with Electric Heating shall be wired for a single point power supply.

**UNIT OPERATING CHARACTERISTICS**

Unit shall be capable of starting and running at 131°F outdoor temperature. The compressor, with standard controls, shall be capable of operation down to 50°F outdoor temperature.

**ELECTRICAL REQUIREMENTS**

All unit power wiring shall enter unit cabinet at a single factory provided gland be capable of side entry.

**REFRIGERANT R-410a**

R-410a refrigerant is highly efficient heat transfer capability and environment friendly having zero Ozone Depletion Potential (ODP). This product is coming with holding refrigerant charge from the factory. Refrigerant charge must be checked before startup to assure design performance.

## MAINTENANCE

The DEH Stellar Packaged Air Conditioners are premium quality machines with very low maintenance requirements. Compressors used in Packaged Units are charged with the correct amount of refrigerant and lubricating oil. Unless there is a leak in the system, no topping up is generally required.

### EVERY MONTH

- Remove the filters and blow compressed air over them to get rid of loose dust. Visually inspect the filter conditions, replace them with new ones of same sizes if required.
- DEH Packaged Air Conditioners are provided with a specially designed drain pan, for proper maintenance check and clean blockages at drain connections if any.

### EVERY THREE MONTHS

- In addition to the monthly maintenance above, check the motor and fan vibration.

### EVERY SIX MONTHS

In addition to the maintenance done every three months :

- The condenser coils should be cleaned by spraying water over it at low pressure or with a brush while ensuring that the fins are not damaged.
- Check all electrical connections and tighten them if required.
- Clean all accessible electrical panels of dirt and dust. Before cleaning the control panels , ENSURE that the electrical power to the unit is switched off.

### EVERY TWELVE MONTHS

In addition to the maintenance done every six months :

- Use a proper cleaning cloth to clean fan blades and motors.
- Ensure that the unit is working properly by checking, current, voltages, pressures and temperatures.
- Check the earthing or grounding of the unit.
- Check the exterior of the unit for any signs of corrosion. Even though it is highly unlikely, if any corrosion that is seen, should be removed by proper sanding the surface. Repaint the unit with proper touch up paint, available from YORK®.
- Check the unit for any unusual vibrations or noise, locate the cause and rectify it by changing mounts, base.

## **Johnson Controls provides comfortable environments wherever you Live, Work or Travel**

Whether you're at home, in a car, or in an office or workplace, chances are there's a Johnson Controls product or service nearby, helping to make your environment more comfortable, safe and sustainable.

Johnson Controls creates smart environments that improve the places where people spend most of their time – their homes, workplaces and vehicles. We anticipate consumer needs, and then integrate technologies, products and services to make life better and easier.

For Johnson Controls, sustain ability matters at every level and through our products, service operations and community involvement, we promote the efficient use of resources to benefit all people and the world. Our triple bottom line of sustain ability that is, economic prosperity, environmental stewardship and social responsibility impacts each and every aspect of our business. York products are now a premier brand manufactured by Johnson Controls. The acquisition of York, gives us a unique insight into designing HVAC products that match your exact requirements. We provide solutions for today's most critical concerns - energy efficiency, refrigerant alternatives and indoor air quality.

Johnson Controls has a wide range of York products for residential, light commercial and commercial applications. Our offering includes package & split air conditioners and heat pumps. In addition, Johnson Controls offers chillers, air handling units, ventilation equipment and controls for larger projects.

Our advanced technology is leading the way in developing efficient and environment friendly solutions for your homes, offices and places of leisure.
